

HADHILUDEEN Z

Full Stack Developer | DevOps Engineer
Chennai, Tamil Nadu

+91 7010941961 | hadhiludeen2k3@gmail.com | linkedin.com/in/hadhiludeen-z

PROFESSIONAL SUMMARY

Full Stack Developer with 2+ years of experience building and deploying scalable enterprise applications across healthcare, manufacturing, and workforce systems. Strong in backend development using Django and CodeIgniter, API design, and database optimization, with hands-on experience delivering production-ready solutions.

Experienced in containerizing applications using Docker and managing deployments across development, staging, and production environments on Linux systems. Additionally, have practical exposure to AI-based development, including building LLM-based chatbot applications and applying prompt engineering techniques, with interest in AI-driven automation and AIOps domains.

TECHNICAL SKILLS

Programming Languages: Python, PHP, JavaScript, C++

Frameworks: Django, CodeIgniter

Frontend: HTML, CSS, Tailwind CSS, React, Bootstrap

Testing: Manual Testing

Databases: MySQL, SQLite, SQL Query Optimization

AI & Automation: LLM APIs, Prompt Engineering, Chatbot Development, RAG Concepts

AI Frameworks (Exposure): LangChain

Vector Databases (Exposure): ChromaDB, FAISS

DevOps & Infrastructure: Docker, Dockerfile Creation, Linux Server Configuration, CI/CD Concepts, EasyPanel, Jenkins

Tools: Git, GitHub, VS Code

PROFESSIONAL EXPERIENCE

6F Tech Consultant Private Limited

Full Stack Developer & DevOps Engineer

Apr 2024 – Present

Full Stack Development

- Built and delivered scalable enterprise backend systems for workforce and manufacturing domains.
- Designed and implemented backend systems using Django and CodeIgniter, handling business logic and REST APIs.
- Engineered relational database schemas and optimized SQL queries, improving system performance and reliability.
- Developed a production-grade EMR (Electronic Medical Records) system enabling secure healthcare data management.
- Contributed to manufacturing workflow systems supporting production processes.

DevOps & Deployment

- Containerized applications using Docker ensuring consistency across development, staging, and production environments.
- Configured and managed Linux-based servers for deploying Django and PHP applications.
- Designed and maintained Development, Testing, and Production environments for structured release cycles.
- Led deployment of enterprise systems to on-premise infrastructure including environment setup and production rollout.
- Performed deployment validation and release verification ensuring stable client delivery.

AI & Automation Engineering

- Developed a chatbot application using LLM APIs to generate responses based on user input.
- Applied basic prompt engineering techniques to improve response quality and relevance.
- Implemented simple context handling using conversation history and summarization.

- Explored usage of vector databases such as ChromaDB and FAISS for storing and retrieving contextual data.
- Designed structured response formats using Python (Pydantic) for consistent outputs.
- Integrated AI functionality into backend systems using Django APIs.

PROJECTS

AI Conversational Agent

- Developed a chatbot system capable of responding to user queries using LLM APIs.
- Built backend services using Django for input processing and response generation.
- Improved response quality using prompt structuring techniques.

Enterprise Systems

- **HRMS (Human Resource Management System)** – Developed using Django backend, Tailwind CSS frontend, and REST APIs for employee management, attendance tracking, and reporting.
- **CLMS (Contract Labour Management System)** – Built REST-based workflows using Django and Tailwind CSS for labour tracking and compliance management.
- **EQM (Enhanced Quality Management)** – Designed quality monitoring and reporting modules using Django backend and REST APIs.
- **MES (Manufacturing Execution System)** – Developed production workflow tracking system using Django, REST APIs, and Tailwind CSS.

EDUCATION

Bachelor of Engineering – Computer Science Engineering
SRM TRP Engineering College (Anna University)
2020 – 2024

CERTIFICATIONS

- Python Programming Certification – Google
- Generative AI and ChatGPT Certification – GUVI

CORE STRENGTHS

- Strong backend engineering and system design skills
- Experience in deployment and production environment management
- Understanding of LLM-based chatbot systems
- Problem solving, debugging, and performance optimization
- Ability to learn and adapt to new technologies
